PROJECT

BUS BOOKING SYSTEM

The bus booking system project aims to create an online platform where users can register, search for bus routes, select seats, book tickets, make payments, receive confirmations, and manage their bookings. Admins can manage bus routes, bookings, payments, and user feedback through a centralized dashboard. The system focuses on scalability, security, and user-friendly design to enhance the booking experience for users while streamlining operations for administrators.

This reservation system has three modules
First module retrieve data from tables required for enquiry.
Second module insert values into the tables on reservation.
Third module deletes values into from the table on cancelation of tickets.

CERTIFICATION

- Attending Java full Stack development course
- Certificate by Typing(lower grade)
- Certificate by national seminar on mathematics and it's application in college

INTERESTS

- Software developer
- Web designing
- Volunteering

DECLARATION

I hereby declare that the above written particulars are true to the best of my knowledge and belief.
